# HTML Blocks and Layout-Lab3

September 10, 2018

## HTML Block

- By default HTML elements have display value, it can be block or in-line
- Block-level always starts on a new line
- Block -level uses full width.
- Examples <div>

### HTML - Block

Block Level Elements in HTML -

<address> <article> <aside> <blockquote> <canvas> <dd> <di> <dl> <dt> <fieldset> <fiigcaption>
<figure> <footer> <form> <h1>-<h6> <header> <hr> <main> <nav> <noscript> <output> 
<section> <tfoot> <video>

#### InLine Elements

- Does not start on new-line and uses only the required width
- Examples <span>

```
<a> <abbr> <acronym> <b> <bdo> <bdo> <big> <br> <button> <cite> <code> <dfn> <em> <i> <img> <input>

<kbd> <label> <map> <object> <q> <samp> <script> <select> <small> <span> <strong> <sub> <sup>

<textarea> <time> <tt>  <textarea> <time> <tt> <sup>
```

# HTML Layout--

- In general it is recommended to use this layout
- Layout has been taken as reference from -<a href="https://www.w3schools.com/html/html\_layout.asp">https://www.w3schools.com/html/html\_layout.asp</a>
- For Lab 3, part 2 I expect you to use header, section, and div, however if you are comfortable please feel free to use other HTML elements.
- We will discuss footer, nav, in future labs.

#### HTML Section

- HTML section defines the section of the document, where you want to present your main content.
- In Lab 3, please use section HTML element after your header
- Example -

```
<section>
 Welcome to Sriram's Webpage 
</section>
```

Review HTML section, Block elements, In line elements Test Locally, if works well push to git, sync your loki and publish your web page in loki.

Update Slack with your reflection for Lab3

Lab 3 resume.html web page apply the HTML elements we learnt Check your loki url in your computer and mobile browser
